Practical Class 5 — Internal Choice[1]

This practical class uses Probe to explore the behaviour of processes defined with internal choice.

Getting Started

1. Start Probe.

Buses

1. Copy the file `buses.csp` to your directory, and load it into your editor and Probe. It contains the definitions for the bus service from lectures. Expand the behaviour, noticing that Probe shows the τ events as well as the observable events.

Back to Specifications

Continue working on the worksheet from last week.

[1] This practical sheet is provided as course material to accompany the book 'Concurrent and Real Time Systems'.
